Maintenance Systems for Flower Beds

In all Lodha projects where flower beds are provided (inside flat area or outside flat area), following guidelines should be adhered to in their design:

1. Flower beds, which have plantation, must be accessible for servicing and maintenance from within the building (within the flat in case flower beds are inside flat area)

2. In Hi end / Luxury segment projects, all flower beds, which have pre-provided soil and plantation, must have automated system of irrigation. If flower bed is provided vacant (viz. without soil and plantation), then automated irrigation is not needed.
